

A FUTURE IN MAKING...

Geared up with excitement, a distinct buzz of enthusiasm filled the air as we walked in The magnificent exteriors held us captivated as we walked into our future abode with a silent reverence.

The long corridors led us straight to what would soon become our lecture halls. With room enough for 200 students, these rooms would be equipped with huge screens for teaching

purposes.

Moving to the next floor, we were greeted with a pleasant surprise as we entered our capacious central library. With the endless possibilities of the volumes that could be stacked in the library, along with the access to the digital library we could almost see the 'Walking Gray's' 'who would flourish here.

The large reading rooms were also a welcome sight. The examination halls greeted us on the same floor and with it came the feeling of the impending doom that was soon approaching. However even examination hall couldn't dampen our spirits that fine day. And so, with a general air of cheer and delight we continued our tour.

The Second floor was the Anatomy Department. It housed the histology lab, the museum and the much-anticipated Dissection laboratory. The dissection hall was large, spacious and divided into blocks by channels which served to keep the hall clean and hygienic. The hospitality we provide to our Cadavers!!!

The best feature of this hall however was the breath-taking sight of the locality it offered- Church, Mosque, bus stop and the humdrum of everyday life. It just couldn't get better! This floor also featured a Museum, wherein the Treasures of this medical college will be stored.

Gaining entry into the Physiology Department, we went around the different laboratories. While Walking through the Haematology Lab, we saw the Preparation rooms and the work stations. This floor also highlighted the Skills Lab and the Clinical Physiology Lab, both being vast and well planned. This floor also housed the Amphibian Lab and the Mammalian Lab.

We saw a couple of Demonstration rooms too.

The Biochemistry Department, on the fourth floor would be consisting of a Laboratory, a Record room, Preparation room, the store and the Museum. Unfortunately, we could not visit this floor due to construction and other issues, but next time we surely will.

We were also told that each department would be provided with Demo Rooms, a Research Laboratory and a departmental library to facilitate learning.

The overlying floors will be occupied by the departments of Community Medicine, Forensic Medicine, Pharmacology, Pathology and Microbiology.

At the end of our tour, our Honourable Dean cum Director, Dr. K S Manjunath, addressed us, informing us about the facilities available. Sir told us that the labs for Medical and Surgical Skill Development and the Central Research Centre would be coming up in the tenth and eleventh floors respectively. We were also delighted by the fact that a College Canteen will be rendered and every floor would be adorned with Coffee Vending Machines!!

We would also like to thank our Medical Superintendent, Dr. Vijayalakshmi, our Principal, Dr. Nagaraj, our Coordinating Officer, Mr. Khaja, our HODs, Dr. Meenakshi Parthasarathy (Anatomy), Dr. Srinivasulu Naidu (Physiology), Dr. Wilma Delphine Silvia (Biochemistry) and our professors for giving us an Early College Exposure. We are definitely eager to move into our New Abode.
